FRONIUS SELECTIVA 4.0

INTELLIGENT BATTERY CHARGING IN INTRALOGISTICS

With the Selectiva 4.0 charger family, Fronius offers one of the most efficient and advanced solutions on the market for charging lead-acid batteries.

Benefit from our innovative battery charging solutions which not only reduces costs, energy usage and CO₂ savings, but also offers our customers sustainable benefits.

CONVINCING QUALITY

Fronius products have an exceptionally long life expectancy and are produced by the highest quality standards. This not only impresses us, but also our customers for more than 75 years. Our intelligent and future-proof products are also offered with an impressive five year product guarantee*.

FLEXIBLE AND ADAPTIVE

We are aware that your everyday business is often very demanding. That is why our Selectiva 4.0 chargers are modularly designed, lightweight and easy to move to the required location, making charging the most common lead acid, lead crystal and CSM batteries possible. Your advantage? A charger that adapts flexibly to your requirements and the different tensions and capacities of your batteries.

YOUR BENEFITS

FEEL THE DIFFERENCE

With the Selectiva 4.0, you benefit from an intelligent and flexible charging technology that is optimally tailored to your needs, depending on the application.

We support you as an independent energy expert to supply tailor-made charging solutions. We are at your service from advice and analysis to planning and implementation.

20 YEARS AND MORE

With a life expectancy of up to 20 years and a quality that goes beyond industry standards, we set a new dimension of reliability.

20+

REDUCE YOUR COSTS SUSTAINABLY

For more than 75 years we have been offering innovative charging systems, intelligent energy management and services to support you to reduce your energy consumption, save on energy costs and lower CO₂ emissions. We stick to that. Ideally together with you.

REJUVENATION TREATMENT FOR YOUR BATTERIES

The particularly efficient and gentle Fronius Ri-charging process adapts individually to the condition of the battery and thus ensures a cool charge and extended battery life.

COOL CHARGING EXTENDS BATTERY LIFE

RI CHARGING PROCESS

With the Ri-charging process, Fronius is offering the best technology for charging lead-acid traction batteries available on the global market. Unlike other processes, this process does not follow a fixed characteristic, but adapts to the requirements of each individual battery. This ensures maximum energy efficiency and a long battery life.

EXTEND YOUR BATTERY LIFE

The Ri-charging process ensures cooler battery charging and thus extends their lifespan on average by 10-15%.

UP TO 30%

LESS ENERGY COSTS

With an overall efficiency of up to 84% from the socket to the battery, Fronius chargers significantly reduce your electricity consumption up to 30%.

DIFFERENT VOLTAGE CLASSES

The Ri loading process enables you to charge different batteries and voltage classes with one charger.

ACTIVELY REDUCED RISKS

The overloading that leads to faster soiling of the battery and the development of dangerous explosive gas, can be dramatically reduced by our charging process.

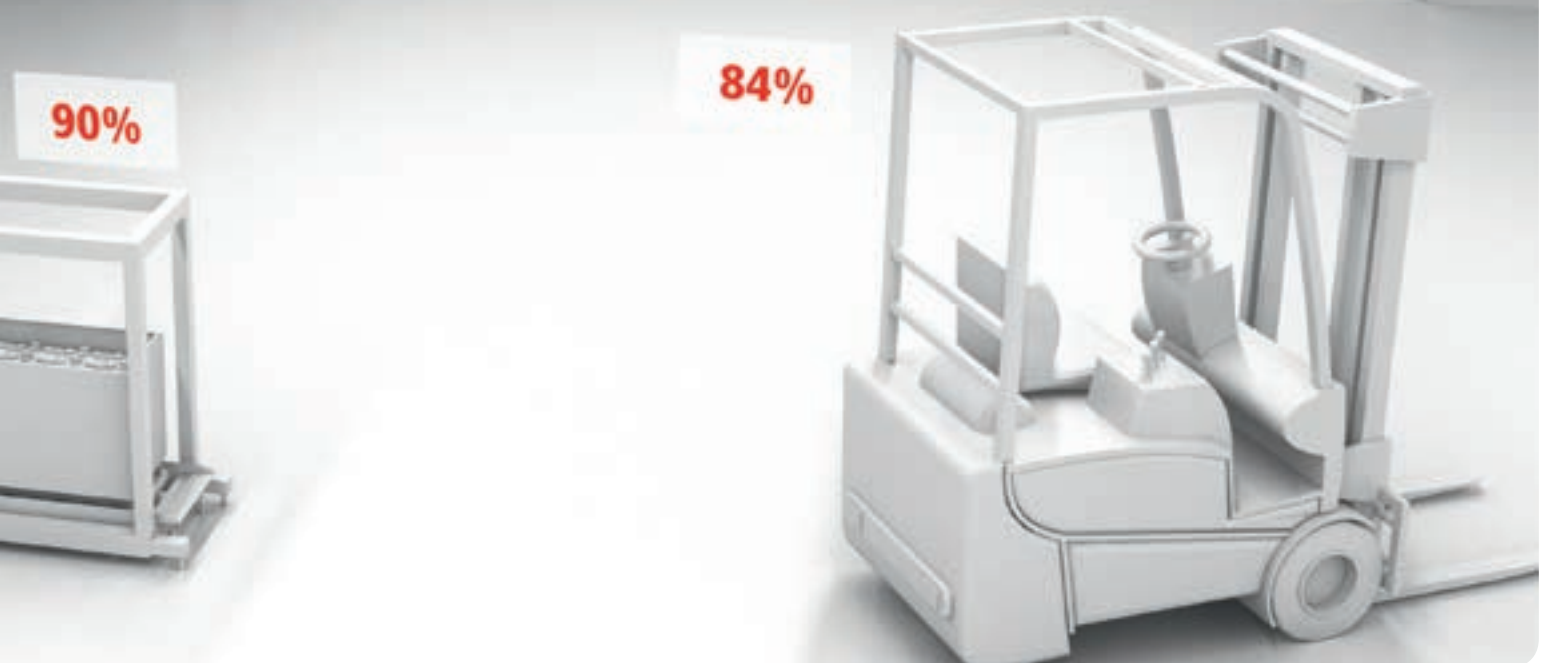

ENERGY-EFFICIENT AND GENTLE ON THE BATTERY

Selectiva 4.0 battery chargers achieve a total efficiency of up to 84 percent using the individual Ri-charging process. Not only can they charge batteries much more efficiently, but they can also reduce damage and maintenance expenditure.

50 Hz transformer technology continues to be widely used in battery chargers for traction batteries, however, this gives rise to high energy consumption as well as excessive warming of the battery during charging, which reduces its service life. Although the high-frequency technology is more efficient in this respect, there are major differences here, too. With the Ri-charging process, Fronius is offering the best technology

for charging lead-acid traction batteries available on the market. Our charging process does not follow a fixed characteristic, but adapts each charging process to the needs of the individual battery. This ensures maximum energy efficiency and a long battery life.

CHARGING TECHNOLOGY	DEVICE EFFICIENCY	x	CHARGING EFFICIENCY	=	OVERALL EFFICIENCY
50 HZ	80%	x	70%	=	56%
HF	90%	x	75%	=	68%
AIT	92%	x	80%	=	74%
AIT WITH Ri-CHARGING PROCESS	93%	x	90%	=	84%

SELECTIVA FAMILY

ONE BATTERY CHARGER FOR EVERY BATTERY

The battery chargers from the Selectiva product family offer flexible charging of batteries with different voltages and capacities. Among the benefits for you are the simple and standardised operation and amount of space needed as well as low operating costs.

FUNCTIONS

FOR SELECTIVA BATTERY CHARGING SYSTEMS

The Selectiva product family offers a large range of functions which help to extend the service life of your lead-acid batteries. The primary focus is to optimise the charging process for each individual battery according to its unique requirements – and to simultaneously reduce costs.

RI-CHARGING CHARACTERISTIC

The Ri-charging process adapts to each battery's requirements and delivers exactly the right current for optimal charging.

CALENDAR FUNCTION

This enables time-controlled charging, making it possible to exploit cheaper energy rates and accommodate individual shift patterns.

OPPORTUNITY CHARGING AND RAPID CHARGING CHARACTERISTIC

You can set a special characteristic for opportunity charging and rapid charging at the push of a button.

DEEP DISCHARGE CHARACTERISTIC

This special characteristic makes it possible for a deeply discharged battery to be completely recharged.

NO MONDAY MORNING SYNDROME

A programmable, time-controlled equalising charge ensures that a full charge is available over the weekend and after public holidays.

CURRENT-PEAK AVOIDANCE

Low power consumption and adjustable charging start times decreases the required connection load and peak load.

NEW

CSM CHARACTERISTIC

The CSM characteristic enables this type of battery to be optimally charged and can be combined with the Power Charging option.

NEW

LEAD CRYSTAL CHARACTERISTIC

The Lead Crystal function contains a special characteristic for optimally charging these maintenance-free batteries.

VISUALISATION OF THE COOLEST BATTERY

A blue LED indicator signals a fully charged, cooled and usable battery.

AUTOMATIC BATTERY VOLTAGE DETECTION

The intelligent battery charger automatically detects the battery voltage as soon as it is connected.

REFRESH CHARACTERISTIC

Using the Refresh characteristic raises the performance of a weak battery.

OPTIONS

ADDITIONAL HARDWARE AND SOFTWARE

The Selectiva 4.0 product line offers an extensive range of accessories for optimal use in many different areas of application.

AIR-PULS (ECS)

The pneumatic electrolyte circulation system (ECS) guarantees a fast and extremely gentle charge for your traction batteries.

LED STRIP, CHARGING STATUS INDICATION

Indicates from a distance which traction battery is being charged, is already fully charged, or is cooled down and ready for use.

RELAY BOARD, OPTION BOX

Error messages and additional features such as the Aquamatic control function, external air pump and refill indicator can be displayed.

AIR FILTER

This provides effective protection against dirt for the interior of your battery charger and avoids short circuits.

TEMPERATURE-CONTROLLED CHARGING

This adapts the charging voltage, and therefore the output, according to the temperature of the battery, thereby providing sustainable protection and increasing the battery's service life.

REMOTE CONTROL SYSTEM

Ideal for controlling and monitoring battery chargers even over larger distances. The user interface can be placed up to 30 m away from the device.

EXTERNAL START/STOP

If the charging lead is disconnected during charging, the external start/stop function prevents sparking.

CHARGING PLUGS

DIN-compliant charging plugs from REMA or Schaltbau, as well as tab connectors, are part of our standard product portfolio. Special plugs are available upon request.

AQUAMATIC CONTROL

An automatic filling system fills your battery with demineralised water during every charge. This prevents damage that can occur due to insufficient refilling.

NEW

POWER CHARGING

With the Power Charging option it is possible to increase a low lead battery level with help of rapid or opportunity charging within a short amount of time.

COMMON ERROR

The common error function can be used to communicate error messages to thirdparty systems quickly and easily.

NEW

COLD LOGISTICS

The Cold Logistics option increases the performance of the cooled battery by increasing the temperature. The characteristic is adapted in such a way that the battery is fed with a higher amount of energy in order to warm it.

COMPONENTS FOR CHARGING STATIONS AND ROOMS

Upon request, we also offer complete solutions for your charging rooms, including custom-built items for outdoor solutions.

AVAILABLE CHARACTERISTICS

PERFECTLY TAILORED TO YOUR BATTERY

NEW

POWER CHARGING CHARACTERISTIC

With the Power Charging option it is possible to increase a low lead battery level with help of rapid or opportunity charging within a short amount of time.

PZS CHARACTERISTIC

Due to the fact that it can be used universally, the PzS battery is the most widespread traction cell with more than 75% market share. The Ri charging process has been specially developed and adapted for this technology.

NEW

CSM CHARACTERISTIC

Forklift trucks which are equipped with the CSM battery can be charged in the best possible manner using our Selectiva 4.0. With these types of battery the Power Charging option – a feature for rapid charging and opportunity charging – can also be used.

NEW

LEAD CRYSTAL CHARACTERISTIC

Forklift trucks which are equipped with a Lead Crystal battery can only be charged with special characteristics. We also offer these characteristics as standard in our Selectiva 4.0 devices. These maintenance-free batteries have the advantage that they are ideally suited for rapid charging.

Charging times are valid for normal usage (Pb-WET, Pb-CSM-WET: DoD 70%)

*CSM batteries can only be charged with the IUI characteristic.

FRONIUS PERFECT CHARGING

EFFICIENT AND INDIVIDUAL

COMPLETE SOLUTIONS

Fronius offers an extensive range of products for your charging infrastructure – from practical charging and safety modules to the intelligent information and management system Cool Battery Guide Easy. We also develop bespoke solutions for special requirements.

SUSTAINABLE CHARGING SOLUTIONS

Due to ever stricter environmental protection requirements and legislation, sustainable technologies are increasingly in demand, particularly for supplying energy. We will help you to make your company fit for the future, be that by switching to electrically powered forklift trucks for your intralogistics operations, using efficient battery chargers, or combining battery charging technology and photovoltaics.

/ More information on Fronius and the Ri-charging process can be found at:

THREE BUSINESS UNITS, ONE GOAL: TO SET THE STANDARD THROUGH TECHNOLOGICAL ADVANCEMENT.

What began in 1945 as a one-man operation now sets technological standards in the fields of welding technology, photovoltaics and battery charging. Today, the company has around 5,440 employees worldwide and 1,264 patents for product development show the innovative spirit within the company. Sustainable development means for us to implement environmentally relevant and social aspects equally with economic factors. Our goal has remained constant throughout: to be the innovation leader.
